

TOKENOMICS

Tokenomics Model:

- Total Supply: 1000 million MetaD.
- Company Holdings: MetaD (30%).
- Public Distribution: MetaD (70%).

Coin-Burning Mechanism:

- Year 5: 200 million MetaD burned (20%).
- Year 10: 100 million MetaD burned (15%).
- Year 15: 70 million MetaD burned (7%).
- Year 20: 30 million MetaD burned (3%).

BENEFITS FOR HOLDERS

1. Fair Distribution:

With 70% of MetaD designated for public distribution, ensures a fair and decentralized ownership structure.

2. Scarcity and Value Appreciation:

The gradual reduction in total supply through halving and coin burning is designed to enhance scarcity, potentially leading to value appreciation for MetaD holders.

3. Sustainable Growth:

The company's commitment to holding only 30% of the total supply fosters trust and ensures a balanced ecosystem for sustained growth.

4. Ecosystem Alignment:

The burning mechanism aligns with holders' interests, as it aims to control inflation and contribute to the long-term value of MetaD.

MetaD Coin's tokenomics model, coupled with a fair distribution strategy and coin-burning mechanism, aims to create a sustainable and rewarding ecosystem for its community of holders.
